

## Self-Installation and Configuration of Felix

This document is a guideline to install and run the information-service application in a self-configured felix framework.

### Download and Install

1) Download the felix framework from <http://felix.apache.org/site/downloads.cgi>

2) Install and start required libraries also from <http://felix.apache.org/site/downloads.cgi>:

Required libraries: Junit, junit-4.5, Event Admin, iPOJO Extender pattern handler, junit4osgi, junit4osgi - shell command, iPOJO

3) Install and start the information service application bundles

4) Afterwards you can follow the [Scenario Guideline](#).

**Note:** You have to copy the testing, old respectively new version of the collect-information service in the directory you have installed the bundles from!
